K	5/8	Bolt 1/2"	<p><b>Note:</b> 1-The ASD capacities are based on limit states associated with mechanical steel strength of the bracket to the helical pile shaft. Wood post/beam (above), shaft, or geotechnical capacities may control. The member supported by the bracket must be designed by the registered design professional and must not exceed the tabulated capacities. 2-The tabulated capacities assume the pile foundation system is sidesway braced per IBC Section 18.10.2.2. 3-Tabulated capacities based on three (3) - 1/2 - inch diameter hex head bolts. 4-All components above the bracket, including the compression and tensile capacities of the wooden member based on species and its situational bearing conditions. Additionally, the connection between the wood member and the U bracket is to be determined by the design professional on a case by case basis. 5-Capacities for galvanized steel brackets are based on galvanized steel losing 0.013-inch (330µm) steel thickness as indicated in Section 3.9 of AC308 for a 50-year service life.</p>
