Mechanical torsion rating is the maximum torsional resistance of the steel shaft.
 Maximum Torque Per Soil Tests is the maximum torque achieved during field axial

verification testing that was conducted to verify the pile axial capacity related to pile-soil interaction.

for the specific pile model. See Section 4.1.5 for additional information.

5. Maximum Installation Torque rating is the lower of the "mechanical torsion rating" and the "maximum torque per soil tests".

maximum installation torque rating for the specific pile model. Allowable soil capacity is

determined from Pa = Pult /2.0 based on the corresponding maximum installation torque rating

6. The allowable soil capacity under the IRC must be determined in accordance with Equation 3 of Section 4.1.5 of this report, when applicable.

*7. Min required installation depth for tension is 12D where D is the diameter of the uppermost helix.

8. Max Soil Capacities based on the the tube torsional cpacity.
