MECHANICAL ASD LOAD CADACITY

determined from Pa = Pult /2.0 based on the corresponding maximum installation torque rating

4. Maximum Torque Per Soil Tests is the maximum torque achieved during field axial

verification testing that was conducted to verify the pile axial capacity related to pile-soil

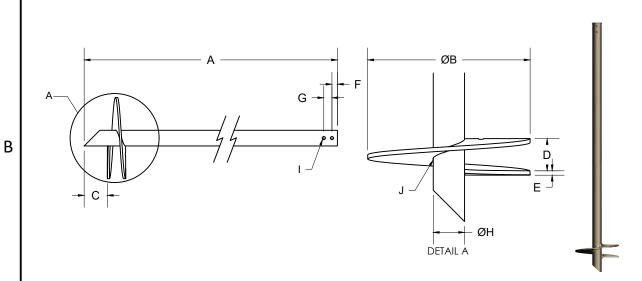

5. Maximum Installation Torque rating is the lower of the "mechanical torsion rating" and the

6. The allowable soil capacity under the IRC must be determined in accordance with Equation

*7. Min required installation depth for tension is 12D where D is the diameter of the uppermost

for the specific pile model. See Section 4.1.5 for additional information.

3. Mechanical torsion rating is the maximum torsional resistance of the steel shaft.
